

ROTARY TABLE SHOT BLASTING MACHINES

for finishing maintenance regeneration GLASS MOLDS

We are producers of shot blasting machines and we also offer second-hand automatic machines, perfectly overhauled and guaranteed for one year.

We offer AUTOMATIC ROTARY TABLE SHOT BLASTING MACHINES for production, maintenance and regeneration of molds in your sector.

Availability also of cabinets for manual shot blasting

How do they work :

an operator places the molds to be treated directly on the table, ensuring good coverage and uniformity of treatment. Once the door interlocked by the safety microswitch is closed, the pre-set automatic shot blasting cycle can be started. The shot blasting time may vary according to the degree of finish required. The pieces deposited on the rotating table will be put in rotation on the turbine front and hit by the projected ceramic microspheres and will undergo the action of shot blasting until the required finish

Models: they can have table diameters of 500 mm, 1,000 mm, 1300 mm, 2000 mm and more.

Grit used: ceramic microspheres

ceramic microspheres
