

CHROMING of the CARBON FIBER

with our Sputtering machines it is possible to coat carbon fiber components with metals

with dual purpose:

decorative :

wide and captivating range of "metallic" colors with the possibility of total or partial coverage, possible further decorations such as laser engraving, pad printing, serigraphy

functional :

increase in heat dissipation capacity, electrical conduction

We have been manufacturing vacuum sputtering PVD machines for 70 years which allow cycles: rapid and ecological, economic, perfectly repeatable, uniform covers with adjustable thickness, low temperatures, reduced cycle times, constant coloring.
